

Gabarito

Avaliação 2 (AV2) – INF03098 – Engenharia de Software III

2 pontos Data: _____

Questão 1. Conteúdo exato de App/api/Dockerfile:

```
1 # Etapa 1: build - instala dependências e compila o TypeScript
2 FROM node:20-alpine AS build
3
4 WORKDIR /app
5
6 COPY package*.json ./
7 RUN npm install
8
9 COPY tsconfig.json ./
10 COPY src ./src
11 RUN npm run build
12
13 # Etapa 2: production - executa a API já compilada
14 FROM node:20-alpine AS production
15
16 WORKDIR /app
17
18 ENV NODE_ENV=production
19
20 COPY package*.json ./
21 RUN npm install --omit=dev
22
23 COPY --from=build /app/dist ./dist
24
25 CMD ["node", "dist/server.js"]
```

Questão 2. Conteúdo exato de App/docker-compose.yml:

```
1 name: cupmatches
2 services:
3   mongodb:
4     image: mongo:7
5     container_name: copa-mongodb
6     ports:
7       - "${MONGODB_PORT}:27017"
8     volumes:
9       - mongodb_data:/data/db
10
11   api:
12     build:
13       context: ./api
14     container_name: copa-api
15     environment:
16       PORT: 3000
```

```
17     MONGODB_URI: ${MONGODB_URI}
18   ports:
19     - "${API_PORT}:3000"
20   depends_on:
21     - mongodb
22
23   web:
24     build:
25       context: ./web
26     container_name: copa-web
27     ports:
28       - "${WEB_PORT}:80"
29     depends_on:
30       - api
31
32   volumes:
33     mongodb_data:
```

Questão 3. Conteúdo exato de App/.env:

```
1 API_PORT=3000
2 WEB_PORT=5173
3 MONGODB_PORT=27017
4 MONGODB_DATABASE=cupmatches
5 MONGODB_URI=mongodb://mongodb:27017/cupmatches
```

Questão 4. Conteúdo exato de App/.github/workflows/api-test-bdd.yml:

```
1 name: API - Testes BDD
2
3 # Executa em qualquer commit e também manualmente pela aba Actions
4 on:
5   push:
6     workflow_dispatch:
7
8 jobs:
9   test-bdd:
10     name: API - testes BDD
11     runs-on: ubuntu-latest
12
13     services:
14       mongodb:
15         image: mongo:7
16         ports:
17           - 27017:27017
18
19     defaults:
20       run:
21         working-directory: App/api
22
23     env:
```

```
24 MONGODB_URI: mongodb://localhost:27017/cupmatches
25 PORT: 3000
26 API_URL: http://localhost:3000
27
28 steps:
29   - name: Checkout
30     uses: actions/checkout@v4
31
32   - name: Configurar Node.js
33     uses: actions/setup-node@v4
34     with:
35       node-version: 20
36
37   - name: Instalar dependências
38     run: npm install
39
40   - name: Build (TypeScript)
41     run: npm run build
42
43   - name: Seed do banco de dados
44     run: npm run seed
45
46   - name: Subir API
47     run: |
48       npm start &
49       sleep 5
50
51   - name: Executar testes BDD
52     run: npm run test:bdd
```

Questão 5. Sequência de comandos:

```
1 docker compose up -d --build
2 git push origin main
```

Observação: o *push* dispara automaticamente o workflow `api-test-bdd.yml` no GitHub Actions, que executa os testes BDD da API.
